

Spam and Viruses

The district utilizes *Barracuda* box to filter spam and *Norton Antivirus* virus protection. Spam filtering is an imperfect science...set the filter too high and legitimate email is blocked...set it too low and spam fills your mailbox. Every attempt is made to balance the district needs with our settings for this product but, in the end, it will mean that spam will get through. Virus definitions are updated on every computer as users boot-up which accounts for the elongated time before your computer is up and running.
